Application/Control Number: 10/750,821

Art Unit: 2834

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Hori.

Hori figure 4, teaches a SAW device flip chip bonded to printed substrate 36 via A1-Au bonding while the two elements are sealed with Au-Au (#35, #38) bonding. They are joined by the same method (melting). Hori, figs. 5-9 teaches a SAW flip-chip mounted to a printed substrate using A1-Au (gold bump) bonding and a solder material (col. 5, lines 22-37). The same method is used to complete both bonds: thermo compression bonding (col. 7 line 51-col. 8, lne 17). Regarding claim 4, once the device is bonded, the gold bump plates both the SAW electrode and the surface of the internal electrode.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6, 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hori.

As noted above, Hori teaches the basic electronic device structure. Hori does not explicitly use some of the substrate materials. However, it has long been held that

Application/Control Number: 10/750,821 Page 3

Art Unit: 2834

selection from among known materials is within the skill expected of the routineer. Since each of the substrate materials is known per se for use in electronics (official notice taken). It would have been obvious to one of ordinary skill in the art to select them on the basis of cost, weight, ease of manufacture strength etc.

Further cited of interest are Gerber, Nohara, Takoshima, Kobayashi and Ryoichi.
